Spirularin®

**Nail Spray
Nail Serum**

Ocean power protection against nail fungus!

With the patented microalgae active ingredient Spiralin®.

Spirularin® N

Care and regeneration of problem nails with microbial protection.

SPIRALIN®
MICROALGAE EXTRACT
Protects against germs and improves cell regeneration.

HAMAMELIS
Soothes irritation, promotes wound healing.

JOJOBA OIL AND AVOCADO
Provides cracked, dry nails with moisture and care.

Recommended by podiatrists

» I use the Spirularin® N nail serum and nail spray to accompany the treatment of nail fungus and nail changes of any kind. The microalgae extract has the effect of strengthening nail growth. You can clearly see that the nail grows back stronger and healthier.«

Eskild Sørensen, podiatrist

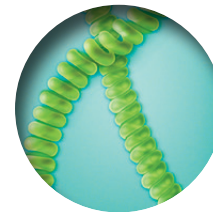

Common causes of problem nails.

The causes of weakened nails can be wide-ranging. Vitamin deficiency, shoes and socks that are too tight, cracks or injuries, incorrect care or illnesses are just some of them. If the natural protective barrier is disturbed, bacteria, fungi or germs can penetrate. Fungal diseases are among the most common nail problems. In general, nail fungus can affect anyone who comes into contact with the pathogens. It is important to react quickly.

How a professional treatment with Spirularin® N can help.

The first step back to nail health is to seek professional treatment at a podiatry practice. We recommend following the treatment concept of Niederau* to remove the fungus-infested parts of the nail, e.g. with urea occlusive dressing (40% / 48 h). The second treatment step is carried out at home using Spirularin® N nail products.

The microalgae active ingredient Spiralin® forms a protective film around healthy skin cells and repels germs such as fungi and bacteria and prevents fungal strains from settling into the nail.

Spiralin® inside

The unique microalgae active ingredient Spiralin® is extracted from the microalgae Spirulina platensis using a patented process. This 3.6 billion-year-old algae species has special defence skills, which it has developed over the course of evolution against its natural enemies such as bacteria, fungi and viruses.

Practical concept for the treatment of nails with nail fungus according to Niederau*.
