Spirularin®

NEW

Bring
nail folds
back into
balance.

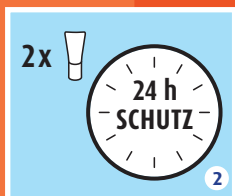

With the Micro Algae Active
Protection Spiralin® and Zinc Oxide.

Spirularin® NF

Care, protection and regeneration for sensitive nail folds.

1 To protect sensitive nail folds, apply a thin layer to the nail fold in the morning and evening and rub in. For irritated nail folds, apply the product in a thick layer, cover with a household plaster and clean and renew daily.

2 For 24-hour protection, apply Spirularin® NF Ointment in the morning and evening.

3 The microalgae active ingredient Spiralin® acts like a protective film around healthy skin cells and can prevent the spread of the infection. In addition, zinc oxide (20%) soothes the skin thanks to its anti-inflammatory and wound-healing properties.

The application should be continued until the cause of the nail fold irritation has been remedied (usually after completion of a nail correction treatment by a podiatrist) and the skin tissue in the area of the nail fold has completely regenerated.

Recommended by podiatrists

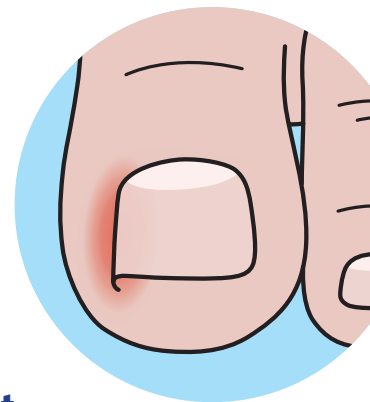

» My wishes for such a product have been fulfilled!

I wanted a good wound care ointment with the Spiralin algae active ingredient that can be combined with all braces. «

Anke Niederau, podiatrist

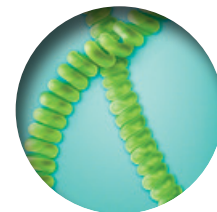

What causes nail fold inflammation?

Inflammation of the nail fold is one of the most common nail problems. Pressure points and ingrown nails destroy the natural skin barrier and germs can enter the healthy skin more easily.

Why is Spirularin® NF Nail Fold Ointment particularly suitable for the protection and regeneration of sensitive nail folds?

Spirularin® NF Ointment contains the unique microalgae active ingredient Spiralin®. It wraps itself around healthy skin cells like a protective film and can thus inhibit or completely prevent the spread of infection. The body's own defences are supported in order to bring the disturbed skin balance back into balance in a completely natural way. In addition to Spiralin®, the ointment contains zinc oxide (20%), which is generally known for its pronounced anti-inflammatory properties.

Spiralin® inside

The unique microalgae active ingredient Spiralin® is extracted from the microalgae *Spirulina platensis* using a patented process. This 3.6 billion-year-old algae species has special defence skills, which it has developed over the course of evolution against its natural enemies such as bacteria, fungi and viruses.
