

Application and mode of action.

With patented microalgae active ingredient Spiralin®

1 Inflammation of the nail fold is one of the most common nail problems. Pressure points and ingrown nails destroy the natural skin barrier and germs can enter the healthy skin more easily.

2 To protect sensitive nail folds, apply a thin layer to the nail fold in the morning and evening and rub in. For irritated nail folds, apply the product in a thick layer, cover with a household plaster and clean and renew daily.

3 For 24-hour protection, apply Spirularin[®] NF Ointment in the morning and evening.

4 The microalgae active ingredient Spiralin® acts like a protective film around healthy skin cells and can prevent the spread of the infection. In addition, zinc oxide (20%) soothes the skin thanks to its anti-inflammatory and wound-healing properties.

The application should be continued until the skin tissue in the area of the nail fold has completely regenerated.
